WARNING

IMPROPER USE CAN CAUSE SLIPPAGE, RESULTING IN SEVERE PERSONAL INJURY OR AMPUTATION!

Improper use of the push stick can create a greater hazard than pushing a workpiece by hand.

To prevent this hazard, adhere to the following:

1. Only use this push stick with material that:

b. Has a width from 2" to 6".

(Use a Push Block (not included) when cutting widths under 2", see reverse side for details.)

c. Has a square end.

2. Keep the push stick and your hands clean and dry.

3. Grip the push stick firmly and press on the workpiece parallel to the blade, but not along the same line.

4. Fully contact the workpiece with the end of the push stick.

Both the top and the side of the workpiece must fully contact the end of the stick.

5. Do not press forcefully against the workpiece. To prevent excess resistance:

a. Align the saw's fence with the blade.

b. Properly support long workpieces using rollers or other supports (sold separately).

ADDITIONAL OPERATION WARNINGS

1. Keep hands and push stick clear of the saw blade and out of the path of the saw blade. See "Proper Placement of Push Stick", below right.
2. Wear ANSI-approved safety impact eye goggles when using this product.
3. Do not modify this product, and do not use this product for a purpose for which it was not intended.
4. Do not hold onto or touch the "free end" of the workpiece, or a "free piece", that is cut off while power is ON and/or the saw blade is rotating.
5. Use this Stick only on a table saw. Other tools can push the workpiece up and require other means to move the workpiece through.
6. Read all information provided with table saw to be worked on before use.
7. The warnings, precautions, and instructions discussed in this Instruction Sheet cannot cover all possible conditions and situations that may occur. The operator must understand that common sense and caution are factors which cannot be built into this product, but must be supplied by the operator.

Proper Placement Of Push Stick

To Build a Push Block (not included) (FOR USE WHEN CUTTING WIDTHS UNDER 2")

WARNING! When using wood screws, locate them so they will not accidentally come in contact with the saw blade.

Note: The push block design shown above is only one type of push block. Other push block designs may be needed for various operations or tools. Refer to tool safety information to determine the required safety equipment.
