IMPORTANT SAFETY INSTRUCTIONS

INSTRUCTIONS PERTAINING TO A RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS

WARNING – When using tools, basic precautions should always be followed, including the following:

General

To reduce the risks of electric shock, fire, and injury to persons, read all the instructions before using the tool.

Work area

a. Keep the work area clean and well lighted. Cluttered benches and dark areas increase the risks of electric shock, fire, and injury to persons.

b. Do not operate the tool in explosive atmospheres, such as in the presence of flammable liquids, gases, or dust. The tool is able to create sparks resulting in the ignition of the dust or fumes.

c. Keep bystanders, children, and visitors away while operating the tool. Distractions are able to result in the loss of control of the tool.

Personal safety

a. Stay alert. Watch what you are doing and use common sense when operating the tool. Do not use the tool while tired or under the influence of drugs, alcohol, or medication. A moment of inattention while operating the tool increases the risk of injury to persons.

b. Dress properly. Do not wear loose clothing or jewelry. Contain long hair. Keep hair, clothing, and gloves away from moving parts. Loose clothes, jewelry, or long hair increases the risk of injury to persons as a result of being caught in moving parts.

c. Do not overreach. Keep proper footing and balance at all times. Proper footing and balance enables better control of the tool in unexpected situations.

d. Use safety equipment. A dust mask, non-skid safety shoes and a hard hat must be used for the applicable conditions. Wear heavy-duty work gloves during use.

e. Always wear eye protection. Wear ANSI-approved safety goggles with side shields.

f. Always wear hearing protection when using the tool. Prolonged exposure to high intensity noise is able to cause hearing loss.

g. Do not attach the hose or tool to your body. Attach the hose to the structure to reduce the risk of loss of balance if the hose shifts.
Tool use and care

a. **Use clamps or another practical way to secure and support the workpiece to a stable platform.** Holding the work by hand or against the body is unstable and can lead to loss of control.

b. **Do not force the tool.** Use the correct tool for the application. The correct tool will do the job better and safer at the rate for which the tool is designed.

c. **Disconnect the tool from the air source before making adjustments, doing tool maintenance, clearing jams, leaving work area, loading, or unloading the tool.** Such precautionary measures reduce the risk of injury to persons.

d. **Store the tool when it is idle out of reach of children and other untrained persons.** A tool is dangerous in the hands of untrained users.

e. **Maintain the tool with care.** A properly maintained tool reduces the risk of binding and is easier to control.

f. **Check for misalignment or binding of moving parts, breakage of parts, and any other condition that affects the tool’s operation.** If damaged, have the tool serviced before using. Many accidents are caused by poorly maintained tools. There is a risk of bursting if the tool is damaged.

g. **Use only accessories that are identified by the manufacturer for the specific tool model.** Use of an accessory not intended for use with the specific tool model, increases the risk of injury to persons.

h. **Use only those fasteners listed in the Specifications chart of this manual.** Fasteners not identified for use with this tool by the tool manufacturer are able to result in a risk of injury to persons or tool damage when used in this tool.

Service

a. **Tool service must be performed only by qualified repair personnel.**

b. **When servicing a tool, use only identical replacement parts. Use only authorized parts.**

c. **Use only the lubricants supplied with the tool or specified by the manufacturer.**

Air source

a. **Never connect to an air source that is capable of exceeding 200 PSI.** Over pressurizing the tool may cause bursting, abnormal operation, breakage of the tool or serious injury to persons. Use only clean, dry, regulated compressed air at the rated pressure or within the rated pressure range as marked on the tool. Always verify prior to using the tool that the air source has been adjusted to the rated air pressure or within the rated air-pressure range.

b. **Never use oxygen, carbon dioxide, combustible gases or any bottled gas as an air source for the tool.** Such gases are capable of explosion and serious injury to persons.

⚠️ SAVE THESE INSTRUCTIONS.
Specific Safety Instructions

1. **Operators and others in work area MUST wear ANSI-approved safety goggles with side shields during use.** The employer is responsible to enforce the use of eye protection by the operator and others in the work area.

2. Do not point the tool toward yourself or anyone whether it contains fasteners or not.

3. Respect the tool as a working implement.

4. No horseplay. This tool is not a toy and can be dangerous if misused.

5. Disconnect the tool from the air supply when:
   a. Unattended.
   b. Performing any maintenance or repair.
   c. Moving the tool to a new location.

6. Do not make any modifications to this tool.

7. Refer to the tool maintenance instructions for detailed information on the proper maintenance of the tool.

8. Fire fasteners into an appropriate work surface only. Do not attempt to fire fasteners into surfaces too hard to penetrate. Do not drive fasteners on top of other fasteners, or at too steep of an angle. Fasteners can ricochet causing personal injury.

9. Do not fire fasteners too close to the edge of a workpiece. They may split the workpiece and fly free, causing personal injury.

10. Keep clear of the workpiece near the area being fastened. Fasteners may bend sideways during firing, causing them to exit the workpiece at an unexpected point, causing personal injury.

11. Transport tool safely. Always disconnect air supply when moving the tool.

12. Hold tool away from head and body. During operation the tool may kick back causing injury.

13. Do not fire fasteners into a workpiece that has people, utility lines, or other objects behind or inside it.

14. Keep balance while using this tool. Keep area below clear if working in an elevated location, and secure air hose to prevent falls from bystanders accidentally pulling on it.

15. Obey the manual for the air compressor used to power this tool.

16. Install an in-line shutoff valve to allow immediate control over the air supply in an emergency, even if a hose is ruptured.

17. Do not engrave or stamp anything into the housing to avoid weakening it.
18. **WARNING:** Some dust created by power sanding, sawing, grinding, drilling, and other construction activities, contains chemicals known [to the State of California] to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are:
- Lead from lead-based paints
- Crystalline silica from bricks and cement or other masonry products
- Arsenic and chromium from chemically treated lumber
Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: work in a well ventilated area, and work with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles.
(California Health & Safety Code § 25249.5, et seq.)

**WARNING:** The brass components of this product contain lead, a chemical known to the State of California to cause birth defects (or other reproductive harm).
(California Health & Safety Code § 25249.5, et seq.)

19. People with pacemakers should consult their physician(s) before use. Electromagnetic fields in close proximity to heart pacemaker could cause pacemaker interference or pacemaker failure.

20. The warnings and precautions discussed in this manual cannot cover all possible conditions and situations that may occur. It must be understood by the operator that common sense and caution are factors which cannot be built into this product, but must be supplied by the operator.

**Vibration Precautions**

This tool vibrates during use. Repeated or long-term exposure to vibration may cause temporary or permanent physical injury, particularly to the hands, arms and shoulders. To reduce the risk of vibration-related injury:

1. Anyone using vibrating tools regularly or for an extended period should first be examined by a doctor and then have regular medical check-ups to ensure medical problems are not being caused or worsened from use. Pregnant women or people who have impaired blood circulation to the hand, past hand injuries, nervous system disorders, diabetes, or Raynaud’s Disease should not use this tool. If you feel any symptoms related to vibration (such as tingling, numbness, and white or blue fingers), seek medical advice as soon as possible.

2. Do not smoke during use. Nicotine reduces the blood supply to the hands and fingers, increasing the risk of vibration-related injury.

3. Wear suitable gloves to reduce the vibration effects on the user.

4. Use tools with the lowest vibration when there is a choice between different processes.

5. Include vibration-free periods each day of work.

6. Grip tool as lightly as possible (while still keeping safe control of it). Let the tool do the work.

7. To reduce vibration, maintain tool as explained in this manual. If abnormal vibration occurs, stop immediately.

⚠️ **SAVE THESE INSTRUCTIONS.**

Figure A: Components and Controls

Initial Tool Setup/Assembly

Read the ENTIRE IMPORTANT SAFETY INFORMATION section at the beginning of this manual including all text under subheadings therein before set up or use of this product.

Note: For additional information regarding the parts listed in the following pages, refer to the Assembly Diagram near the end of this manual.

Note: This air tool is shipped with a protective plug covering the air inlet. Remove this plug before set up.
Air Supply

**WARNING**

**TO PREVENT EXPLOSION:** Use only clean, dry, regulated, compressed air to power this tool. Do not use oxygen, carbon dioxide, combustible gases, or any other bottled gas as a power source for this tool.

1. Connect a regulator valve, an in-line shut off valve and 1/4” NPT air hose (all sold separately) to the Quick Coupler. Use thread tape on all threaded connections. The air hose must be long enough to reach the work area with enough extra length to allow free movement while working. An in-line shutoff ball valve is an important safety device because it controls the air supply even if the air hose is ruptured. The shutoff valve should be a ball valve because it can be closed quickly. See Figure B and Figure C on page 9 for Air Tool Setup procedures.

**Note:** If an automatic oiler system is not used, add a few drops of Pneumatic Tool Oil into the airline connection before operation. Add a few more drops after each hour of continual use.

2. Attach air hose to compressor’s air outlet. Connect air hose to air inlet. Other components, such as coupler plug and quick coupler, will make operation more efficient, but are not required.

**WARNING!** **TO PREVENT SERIOUS INJURY FROM ACCIDENTAL OPERATION:** Do not install a quick coupler on the tool. A quick coupler contains an air valve that will allow the air tool to retain pressure and operate accidentally after the air supply is disconnected.

**Note:** Air flow, and therefore tool performance, can be hindered by undersized air supply components.

3. The air hose must be long enough to reach work area with enough extra length to allow free movement while working.

4. Close the in-line safety valve between the compressor and the tool.

5. Turn on the air compressor according to the manufacturer’s directions and allow it to build up pressure until it cycles off.

6. Adjust the air compressor’s output regulator so that the air output is enough to properly power the tool, but the output will not exceed the tool’s maximum air pressure at any time. Adjust the pressure gradually, while checking the air output gauge to set the right pressure range.

7. The air pressure setting must not exceed job site regulations/ restrictions. The air pressure setting must not exceed 90 PSI when being used with work pieces that have a thickness of less than 1-3/4”.

8. Inspect the air connections for leaks. Repair any leaks found.

9. If tool will not be used at this time, turn off and detach air supply and safely discharge residual air pressure to prevent accidental operation.

**Note:** Residual air pressure should not be present after the tool is disconnected from the air supply. However, it is a good safety measure to attempt to discharge the tool in a safe fashion after disconnecting to ensure that the tool is disconnected and unpowered.

Operating Instructions

Read the ENTIRE IMPORTANT SAFETY INFORMATION section at the beginning of this manual including all text under subheadings therein before set up or use of this product.

Inspect the tool before use, looking for damaged, loose, and missing parts. If any problems are found, do not use the tool until repaired.

Work Piece and Work Area Set Up

1. Designate a work area that is clean and well-lit. The work area must not allow access by children or pets to prevent distraction and injury.

2. Route the air hose along a safe route to reach the work area without creating a tripping hazard or exposing the air hose to possible damage. The air hose must be long enough to reach the work area with enough extra length to allow free movement while working.

3. Secure loose workpieces using a vise or clamps (not included) to prevent movement while working.

4. There must not be hazardous objects (such as utility lines or foreign objects) nearby that will present a hazard while working.
General Operating Instructions

1. Attach the air supply hose (sold separately) to the tool. If an automatic oiler is not used, add a few drops of Pneumatic Tool Oil to the airline connection before use. Add a few drops more after each hour of continual use.

2. To adjust the driving (countersink) depth, turn the Depth Sleeve, see Figure A on page 7. **CAUTION! Do not loosen the Depth Sleeve too much or the tool may come apart.**

3. Grip the base of the tool in one hand. Note that there is a hand strap and thumb strap on the Leather Cover to help hold the tool.

4. When ready to work, hold a nail by the shaft, and place the flat head into the Nail Guide. The nail will be held in place by the magnet.

5. Place the pointed end of the nail on the workpiece. Keep your free hand away from the tool and the nail.

6. Press the tool straight down. This will trigger the tool and cause it to hammer the nail. Continue pressing down until the nail is driven all the way in.

7. If the tool requires more force to accomplish the task, verify that the tool receives sufficient, unobstructed airflow (CFM) and increase the pressure (PSI) output of the regulator up to the maximum air pressure rating of this tool. **CAUTION! TO PREVENT TOOL AND ACCESSORY FAILURE, RESULTING IN INJURY:** Do not exceed the tool’s maximum air pressure rating. If the tool still does not have sufficient force at maximum pressure and sufficient airflow, then a larger tool may be required.

8. When the nail is hammered all the way down, the tool will stop operating. To stop the tool, release the downward pressure on the Nail Guide.

9. After use, to prevent accidents:
   a. Detach the air supply.
   b. Attempt to fire the Tool against a piece of scrap wood to ensure that it is disconnected.
   c. Clean external surfaces with clean, dry cloth.
   d. Store indoors out of children’s reach.
User-Maintenance Instructions

Procedures not specifically explained in this manual must be performed only by a qualified technician.

**WARNING**

TO PREVENT SERIOUS INJURY FROM ACCIDENTAL OPERATION, BEFORE ANY MAINTENANCE OR REPAIRS ARE DONE:

- Wear ANSI-approved safety goggles with side shields. Other people in the work area must also wear ANSI-approved impact safety goggles with side shields.
- Release the pressure on the Nail Guide.
- Detach the air supply.
- Attempt to fire the Tool against a piece of scrap wood to ensure that it is disconnected.
- Remove any object from the Nail Guide before service.

TO PREVENT SERIOUS INJURY FROM TOOL FAILURE:

Do not use damaged equipment. If abnormal noise, vibration, or leaking air is detected, have the problem corrected before further use.

TO PREVENT EXPLOSION: Lubricate only with specified lubricants.
- Lubricate the air inlet using only pneumatic tool oil.
- Lubricate the internal mechanism using only white lithium grease. Other lubricants may damage the mechanism and may be highly flammable, causing an explosion.

**Note:** These procedures are in addition to the regular checks and maintenance explained as part of the regular operation of the air-operated tool.

**Daily - Air Supply Maintenance:**

Every day, perform maintenance on the air supply according to the component manufacturers’ instructions. The lubricator’s oil level needs to be maintained and the moisture filter must be regularly drained. Performing routine maintenance on the air supply will allow the tool to operate more safely and will also reduce wear on the tool.
## Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Causes</th>
<th>Likely Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tool will not operate.</td>
<td>1. Low or no air pressure.</td>
<td>1. Check that compressor is working properly. Check air regulator. Check air lines for leaking or blockage.</td>
</tr>
<tr>
<td></td>
<td>2. Corroded Piston Assembly (9).</td>
<td>2. Spray pneumatic tool oil into the Air Inlet (23). If tool still won't operate, take to a qualified service technician for repair.</td>
</tr>
<tr>
<td></td>
<td>3. Damaged seals or O-rings.</td>
<td>3. Take tool to a qualified service technician for repair.</td>
</tr>
<tr>
<td>Insufficient fastener depth.</td>
<td>1. Incorrect depth setting.</td>
<td>1. Adjust Depth Sleeve.</td>
</tr>
<tr>
<td></td>
<td>2. Not enough air pressure.</td>
<td>2. Check for loose connections and make sure that air supply is providing enough air pressure (PSI) to the tool's air inlet. <strong>Do not exceed maximum air pressure.</strong></td>
</tr>
<tr>
<td></td>
<td>3. Incorrect lubrication or not enough lubrication.</td>
<td>3. Lubricate using pneumatic tool oil and grease according to directions.</td>
</tr>
<tr>
<td></td>
<td>4. Mechanism contaminated.</td>
<td>4. Have qualified technician clean and lubricate mechanism. Install in-line filter in air supply as stated in Initial Set Up: Air Supply.</td>
</tr>
<tr>
<td>Fasteners drive too deeply.</td>
<td>Incorrect depth setting.</td>
<td>Adjust Depth Sleeve.</td>
</tr>
<tr>
<td>Severe air leakage. (Slight air leakage is normal, especially on older tools.)</td>
<td>1. Cross-threaded housing components.</td>
<td>1. Check for incorrect alignment and uneven gaps. If cross-threaded, disassemble and replace damaged parts before use.</td>
</tr>
<tr>
<td></td>
<td>2. Loose housing.</td>
<td>2. Tighten housing assembly. If housing cannot tighten properly, internal parts may be misaligned.</td>
</tr>
<tr>
<td></td>
<td>3. Damaged valve or housing.</td>
<td>3. Replace damaged components.</td>
</tr>
<tr>
<td></td>
<td>4. Dirty, worn or damaged valve.</td>
<td>4. Clean or replace valve assembly.</td>
</tr>
</tbody>
</table>

Follow all safety precautions whenever diagnosing or servicing the tool. Disconnect air supply before service.
PLEASE READ THE FOLLOWING CAREFULLY

THE MANUFACTURER AND/OR DISTRIBUTOR HAS PROVIDED THE PARTS LIST AND ASSEMBLY DIAGRAM IN THIS MANUAL AS A REFERENCE TOOL ONLY. NEITHER THE MANUFACTURER OR DISTRIBUTOR MAKES ANY REPRESENTATION OR WARRANTY OF ANY KIND TO THE BUYER THAT HE OR SHE IS QUALIFIED TO MAKE ANY REPAIRS TO THE PRODUCT, OR THAT HE OR SHE IS QUALIFIED TO REPLACE ANY PARTS OF THE PRODUCT. IN FACT, THE MANUFACTURER AND/OR DISTRIBUTOR EXPRESSLY STATES THAT ALL REPAIRS AND PARTS REPLACEMENTS SHOULD BE UNDERTAKEN BY CERTIFIED AND LICENSED TECHNICIANS, AND NOT BY THE BUYER. THE BUYER ASSUMES ALL RISK AND LIABILITY ARISING OUT OF HIS OR HER REPAIRS TO THE ORIGINAL PRODUCT OR REPLACEMENT PARTS THERETO, OR ARISING OUT OF HIS OR HER INSTALLATION OF REPLACEMENT PARTS THERETO.

Record Product’s Serial Number Here: ______________________________________

Limited 90 Day Warranty

Harbor Freight Tools Co. makes every effort to assure that its products meet high quality and durability standards, and warrants to the original purchaser that this product is free from defects in materials and workmanship for the period of 90 days from the date of purchase. This warranty does not apply to damage due directly or indirectly, to misuse, abuse, negligence or accidents, repairs or alterations outside our facilities, criminal activity, improper installation, normal wear and tear, or to lack of maintenance. We shall in no event be liable for death, injuries to persons or property, or for incidental, contingent, special or consequential damages arising from the use of our product. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation of exclusion may not apply to you. THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS.

To take advantage of this warranty, the product or part must be returned to us with transportation charges prepaid. Proof of purchase date and an explanation of the complaint must accompany the merchandise. If our inspection verifies the defect, we will either repair or replace the product at our election or we may elect to refund the purchase price if we cannot readily and quickly provide you with a replacement. We will return repaired products at our expense, but if we determine there is no defect, or that the defect resulted from causes not within the scope of our warranty, then you must bear the cost of returning the product.

This warranty gives you specific legal rights and you may also have other rights which vary from state to state.
