## 4. FIRST AID MEASURES

4.1	First Aid:	Device is hermetically sealed. Exposure to lithium battery component is not expected under normal conditions of use. <u>Ingestion:</u> Swallowing a battery can be harmful. 3 volt lithium coin batteries lodged in the esophagus should be removed immediately. Leakage, chemical burns and potential perforation can occur within hours of ingestion. Seek medical attention immediately. Have physician call the NATIONAL BATTERY INGESTION HOTLINE for advice and follow-up at +1 (202) 625-3333 collect day or night. <u>Eyes:</u> Contents of an open battery can cause severe irritation. Splashes are not likely; however, if product gets in the eyes, flush with copious amounts of lukewarm water seek immediate medical attention. <u>Skin:</u> Contents of an open battery can cause skin irritation. Remove contaminated clothing and flush affected areas. Wash thoroughly with soap and water. <u>Inhalation:</u> Remove victim to fresh air at once. If breathing is difficult, administer oxygen. If breathing stops give artificial respiration. Keep person warm, quiet and get medical attention.															
4.2	Effects of Exposure:	<u>Ingestion:</u> Not anticipated under normal handling and use. Irritation to the internal/external mouth area may occur following exposure to leaking battery. <u>Eyes:</u> Not anticipated under normal handling and use. If device is damaged, eye and mucous membrane irritation may occur following exposure to leaking battery. <u>Skin:</u> Not anticipated under normal handling and use. Irritation may occur following exposure to leaking battery. <u>Inhalation:</u> Not anticipated. Respiratory irritation may occur if fumes are released due to an abundance of leaking batteries.															
4.3	Symptoms of Overexposure:	<u>Ingestion:</u> Not anticipated. Irritation may occur following exposure to leaking battery. <u>Eyes:</u> Not anticipated. If device is damaged, eye and mucous membrane irritation may occur following exposure to a leaking battery. <u>Skin:</u> Not anticipated. Irritation may occur following exposure to leaking battery. Symptoms of skin overexposure may include redness, itching, and irritation of affected areas. <u>inhalation:</u> Not anticipated. Respiratory irritation may occur if fumes are released due to heat or an abundance of leaking batteries. Respiratory irritation, headache, irritability may occur if fumes are released due to heat or an abundance of leaking batteries.															
4.4	Acute Health Effects:	Non-irritating when used as directed. No acute health effects reported by the manufacturer.															
4.5	Chronic Health Effects:	Non-irritating when used as directed. No chronic health effects reported by the manufacturer.															
4.6	Target Organs:	The manufacturer has not reported specific data.															
4.7	Medical Conditions Aggravated by Exposure:	An initial x-ray should be obtained promptly to determine battery location. Batteries lodged in the esophagus should be removed immediately since leakage, burns and perforation can occur as soon as 4-6 hours after ingestion.

## 5. FIREFIGHTING MEASURES

5.1	Fire & Explosion Hazards:	As with any fire, wear self-contained breathing apparatus to avoid inhalation of hazardous decomposition products (See Section 2). Water will cool the fire but may react with available lithium in the batteries producing flammable hydrogen. DO NOT RECHARGE. As a typical sealed battery they may rupture when exposed to excessive heat. Rupture may expose lithium to moisture causing it to react or release flammable or corrosive materials. Do not accumulate undischarged batteries together. In case of fire where lithium batteries are present, flood area with water or smother with a Class D fire extinguisher appropriate for lithium metal, such as Lith-X. Virtually all fires involving lithium batteries can be controlled by flooding with water. However, the contents of the battery will react with water and form hydrogen gas. In a confined space, hydrogen gas can form an explosive mixture. In this situation, smothering agents are recommended. A smothering agent will extinguish burning lithium batteries. Emergency Responders should wear self-contained breathing apparatus. Burning lithium manganese dioxide batteries produce toxic and corrosive lithium hydroxide fumes.	
5.2	Extinguishing Methods:	Lith-X-powder, Class D fire extinguisher, Dry Lithium Chloride, Graphite Powder. Not flammable under normal conditions. However, battery will burn if involved in a fire. Call fire department. Cool exterior of battery if exposed to fire to prevent rupture. The electrolyte vapors generated by heat or fire are corrosive.	
5.3	Firefighting Procedures:	DO NOT USE WATER, moist sand, CO <sub>2</sub> , class ABC or soda ash extinguisher. When water is used hydrogen gas may be evolved which can form an explosive mixture with air. Keep containers cool until well after the fire is out, do NOT use water. As in any fire, wear MSHA/NIOSH approved self-contained breathing apparatus (pressure-demand) and full protective gear. Keep containers cool until well after the fire is out. Use water spray to cool fire-exposed surfaces and to protect personal. Fight fire upwind. Prevent runoff from fire control or dilution from entering sewers, drains, drinking water supply, or any natural waterway. Firefighters must use full bunker gear including NIOSH-approved positive pressure self-contained breathing apparatus to protect against potential hazardous combustion or decomposition products and oxygen deficiencies.

**6. ACCIDENTAL RELEASE MEASURES**

6.1	Spills:	None under normal conditions. If the contents leak, observe the following instructions: Secure spill area and maximize ventilation. Stop spill or leak at source if safely possible. Deny entry to all unprotected individuals. Individuals involved in the cleanup must wear appropriate personal protective equipment to avoid breathing vapors or touching liquid. Recover or cover with inert absorbent material and place into appropriate container(s) for disposal. If in water remove if safe to do so. If necessary, dike well ahead of the spill to prevent runoff into drains, municipal sewers, any natural waterway or drinking supply, and open bodies of water. Spills are unlikely as the battery is an enclosed hermetically sealed device.
-----	---------	--

**7. HANDLING & STORAGE INFORMATION**

7.1	Work & Hygiene Practices:	DO NOT swallow, apply excessive force to the positive terminal, drop, weld the terminal or wire to the body of the battery directly, short-circuit the battery, charge, forcibly discharge, heat, expose to open flame, disassemble, reverse the positive and negative terminals when mounting, use different batteries together, touch any liquid that leaks from the battery, or hold the battery for an extended period.
7.2	Storage & Handling:	Keep battery away from water. Never store in hot or very humid place. Storage and handling areas should be equipped with proper containment to capture and neutralize spills.
7.3	Special Precautions:	Do not expose to excessive physical shock or vibration. Storage and use areas should be equipped with eyewash stations and safety showers.
